
Study rooms

We offer a calm atmosphere where students can concentrate on their studies with minimal distractions. There are study spaces, study areas, or private study rooms where you can work individually or in groups. The Medical Library provides computers. You can use the internet access too (Eduroam network). It is essential for students who need to complete online assignments, research papers, or work on projects. You can use e-books, e-journals, and other online resources through CAS login.

The latest addition is the group study room, which can be a great place to collaborate with classmates or create study groups. It can be helpful for students learning from each other and staying motivated. The students can use this [form](#) to reserve this study room only for the needs of their study group.

There are computers or printers available in the Medical library that students may need for their assignments or projects. Computer labs are located in the Medical Library (Na Hradě 91) with more than 80 study places, and in the Educational Centre (University Hospital). The study room of the Educational Centre can offer the latest issues of medical journals for the past year and a smaller amount of books to study for an in-house loan.

Please note that the [opening hours](#) have changed in the summer.
